Subject: Letter of support for the project “*H⁴-VALUE — Heritage, Haptic, Human and High-Tech Values in Architectural Living-Use Ecosystems*”, for the national Call PRIN 2026 (Deadline for submission of proposals: June 1, 2026)

Dear Dr. Mariangela De Vita,

On behalf of the Foundation *Centro per la Conservazione e il Restauro dei Beni Culturali “La Venaria Reale”* (CCR), I would like to express our support for the project proposal *H⁴-VALUE — Heritage, Haptic, Human and High-Tech Values in Architectural Living-Use Ecosystems*, submitted under the framework of the national PRIN 2026 Call by a consortium coordinated by Dr. Mariangela De Vita, researcher at the Department of Engineering, ICT and Technologies for Energy and Transport of the National Research Council (DIITET-CNR).

The CCR Foundation is an institution dedicated to education, conservation and research, actively involved in national and international projects aimed at developing innovative methodologies and technologies for the study, diagnostics and conservation of cultural heritage. Through its research and operational activities in the field of architectural heritage conservation, the CCR Foundation has developed specific expertise in environmental monitoring, risk assessment, and long-term conservation approaches aimed at safeguarding the material and functional integrity of complex cultural heritage sites.

The project addresses highly relevant contemporary challenges concerning architectural heritage management, adaptive reuse, Cultural and Creative Industries, environmental sustainability, and human-centered cultural activation. Considering the coherence of the project with current territorial and cultural regeneration strategies, the CCR Foundation recognizes the scientific relevance of the proposed interdisciplinary framework and the potential impact of *H⁴-VALUE* in enhancing heritage accessibility, cultural participation, and adaptive governance processes.

The CCR Foundation believes that the research perspectives and innovative approaches developed within *H⁴-VALUE* may represent a valuable opportunity for scientific exchange and contribute to the advancement of knowledge and methodologies in the fields of architectural heritage, adaptive reuse, preventive conservation, and Cultural and Creative Industries, while generating positive cultural, social, and territorial impacts.

Therefore, the CCR Foundation is particularly interested in being informed about the developments and outcomes of the *H⁴-VALUE* project, in light of its well-established expertise in monitoring activities and preventive conservation strategies applied to historic residences and ecclesiastical heritage.

Yours sincerely,

Alfonso Frugis
President
